To Whom It May Concern:

Please consider this as a letter of reference for MIC Construction of Batavia, Illinois.

Tri-Com is a three city governmentally owned and operated emergency 9-1-1 communication center. In 2004 Tri-Com went out to bid for a construction manager to manage the construction of a brand new 10,400 square foot building to house the communication center. This building had many special features not found in a normal office building; most notably it has to be strong and secure. Tri-Com awarded a contract to MIC Construction later that year and construction of the new facility began in mid-2004 with completion in mid-2005. Tri-Com is very pleased with the resultant building. It is well constructed, it was completed in a timely matter, and was completed within the budget that had been made available for the project.

In 2006 Tri-Com had a smaller utility building project whereby a 480 square foot utility building was constructed. Because of the satisfaction Tri-Com had with the main building the year before, MIC was awarded a design build contract for this project. The construction of this all masonry and steel utility building began in September of 2006 and was completed in April of 2007. This project was completed in a timely fashion and came within the budget available. Tri-Com remains very satisfied with this project as well.

MIC has been an excellent company to work with. They performed very well with all of the sub-contractors on both of our projects. They stand behind their work even above and beyond the warranty. I would not hesitate to recommend them to anyone seeking to construct or remodel a building. You will have a quality facility and they will work with you even long after the project is completed.

Respectfully,

**Jerry Bleck
Director of Communications**
